Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/812,032

Applicant(s)

SATO ET AL.

Examiner

THANH-TRUC TRINH

Art Unit

1795

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 07 April 2009.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3, 6-9 and 13 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 3, 6-9 and 13 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO-8508)
Paper No(s)/Mail Date _____
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/7/2009 has been entered.

Remarks

1. Claims 3, 6-9 and 13 are pending in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
2. Claims 3, 6-7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Tourneux (US Patent 4336413) in view of Bonn (DE 19521098)

Regarding claim 6, as seen in Figures 1, 2 and 6A, Tourneux teaches a solar cell unit comprising a solar cell module (including solar cells 11 and laminating 12 as seen in Figure 1); a module frame (including frame pieces 21, 22, 23 and 24) provided around the solar cell module as supporting the solar cell module for mounting the solar cell unit on an oblique roof (See col. 1 line 4 to col. 2 line 52); a drain channel (formed by back portion 27, wing 29 and back side of U-shaped portion 25) provided along an edge (or along the side of framing piece 22) of the module frame outside the module frame, wherein the solar cell module has a rectangular shape and the module frame includes two horizontal frame portions (framing pieces 24 and 23) provided parallel to each other to be disposed on a roof ridge side and on an eave side, respectively, when the solar cell unit is mounted on the oblique roof, and a first side frame portion (frame piece 22 in Figure 2, or frame piece 61 in Figure 6A) and a second side frame portion (frame piece 21 in Figure 2, or frame piece 60 in Figure 6A) respectively extending from opposite ends of one of the horizontal frame portions to opposite ends of one of the horizontal frame portions to opposite ends of the other horizontal frame portion; the drain channel is provided along an outer side of the first side frame portion and having a channel bottom (back portion 27) and opposite side walls (wing 29 and back side of U-shaped portion 25); the second side frame portion has a planar projection (horizontal back portion of frame piece 21) projecting horizontally outward from an entire upper

edge of the second side frame portion; and the projection is located at a higher level than the side walls of the drain channel.

The difference between Tournoux and instant claims is the requirement of the width of the drain channel is greater than the width of the projection, a barrier plate which closes one end of the drain channel located on the roof ridge side.

Bonn teaches a barrier plate (or stop edge 5) which closes one end of the drain channel located on the roof ridge side. (See Abstract and the Figure on the front pate).

It would have been obvious to one skilled in the art at the time the invention was made to modify the solar cell unit of Tournoux by incorporating a barrier plate (or stop edge) as taught by Bonn, because Bon teaches that it would block off or stop wawter running backward (See the Abstract of Bonn). Furthermore, Tournoux teaches the drain channel (including bottom portion 27, wing 29 and the back side of U-shape portion 25) is used to direct rain water (See Figures 1-2, col. 3 line 11 to col. 4 line 43, claim 1). Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to recognize that the width of the drain channel can be greater than the projection because the relative dimensions would not perform differently than the prior device, the claimed structure was not patentably distinct from the prior art device. In *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. Denied, 469 U.S. 830, 225 USPQ 232 (1984), the Federal Circuit held that, where the only difference between the prior and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not

patentably distinct from the prior art device. The choice of how wide the projection relative to the width of the drain channel would not significantly alter the performance of the claimed drain channel.

Regarding claim 3, as seen in Figure 2, Tourneux teaches the drain channel has a rib (28) projecting upward from a bottom of the drain channel and extending longitudinally of the drain channel.

Regarding claim 7, as seen in Figure 2, Tourneux teaches the projection (back section of frame portion 21) has a rib (protrusion at the middle) projecting downward from a rear surface of the projection and extending along the second side frame portion (frame portion 21) for dripping rainwater flowing along the rear surface of the projection. (See col. 3 lines

Regarding claim 9, as seen in Figure 6A, Tourneux further teaches a planar auxiliary projection (65a) projecting horizontally outward from an entire upper edge of the first side frame portion (or frame piece 61).

3. Claims 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tourneux in view of Bonn and further in view of Kloke (US Patent 4621472)

Regarding claim 8, Tourneux in view of Bonn teaches a solar cell unit as applied to claims 3, 6-7 and 9 above.

Kloke teaches a mounting structure to support panel (32) for collecting solar energy (See col. 1 lines 9-54), wherein the structure includes a condensation channels 79 and 80 (or drain channels) projecting from the downwardly extending back frame 81 or 82 under the panel and extending along an inner side of the frame. (See Figure 5, col. 8 lines 8-14)

It would have been obvious to one skilled in the art at the time the invention was made to modify the solar cell unit of Tourneux in view of Bonn by incorporating an auxiliary drain channel (or condensation channels) projecting under the module and extending along an inner side of the frame as taught by Klocke into the solar cell units of Tourneux in view of Bonn, because Klocke teaches that the condensation channels are useful in trapping any moisture condensed on the surfaces of the support structure (such as purlins or batten) and of the glass panels. (See col. 8 lines 8-14). Because Tourneux teaches the frame pieces can vary in height by extending the back side of the U-shaped portion upwardly or downwardly as seen in Figures 3, 5B, 6B and because Tourneux, Bonn and Klocke are concerned with forming a supporting structure (or framing) for solar energy collecting panels (such as glass panels 32 in Klocke and laminated solar panels 11 or 41, 42 in Tourneux), one would have reasonable expectation of success from the combination.

Regarding claim 13, as seen in Figure 2, Tourneux teaches the drain channel has a rib (28) projecting upward from a bottom of the drain channel and extending longitudinally of the drain channel.

Response to Arguments

Applicant argues that all prior art rejections are traversed without further explanation. However, the Examiner maintains all previous grounds of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to THANH-TRUC TRINH whose telephone number is (571)272-6594. The examiner can normally be reached on 8:30 am - 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on 571-272-1342. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
